

Leadership

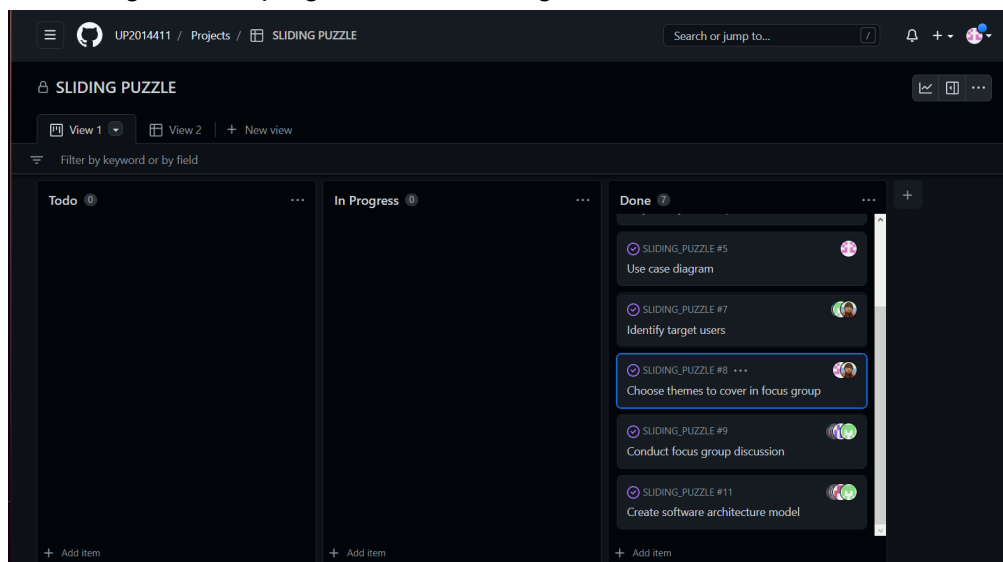

Up2014411 was the team leader for the majority of the assignment, organizing most of the team meetings Up2138915 was the other person who organized the rest of those meetings over WhatsApp.

During meetings and on git the assigning of tasks and work designation was performed by Up2014411 throughout.

Progress Monitoring

Progress monitoring was done via the KanBan model, which was helpful especially towards the end of the assignment when we weren't sure if we missed anything and documenting contributions.

Some tasks needed to be completed before others began so this model was also useful for monitoring our task progression in that regard.

Conflict Resolution

We had a team member who didn't show up to our meetings since the start of term and contributed nothing to the team, as well as disagreements on whether we wanted to have in-person/online meetings, and after a few no-shows, we decided on discord meetings.

Toward the end of the project, the majority of us got on board and completed what remained of the project, and I was very proud of the team.
